DETAILED ACTION

The submission of amendment filed on 6/3/03 is acknowledged. At this point claims 1, 3, 9 have been amended and the remaining claims left unchanged. Thus, claims 1-20 are at issue in the instant application.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 1-3, 6, 10, 12, 13/1, 13/2, 13/3, 13/6, 13/10, 13/12, 14, 18, 20 are rejected under 35 U.S.C. 102(e) as being anticipated by Duflos (US 6,464,382).

4. Referring to Claims **1**, **2** and **20** Duflos discloses (Figs.3, 5) a lighting apparatus for motor vehicle having a transparent material within which light-diffusing foci (inclusions) [14], consisting of local discontinuities in that material in order to diffuse the light emitted by a light source [20] associated with lighting device (Abstract; col.2, lines8-18). While plate [10] is manufactured by

Art Unit: 2875

molding process it is well known in the art and technology of plastic's molding that the inclusions can be arranged at any desired predetermined location of the plate [10]. It is inherent that when material of plate [10] having inclusions is congealed in the mold the local discontinuities (inclusions) in that material are irreversible modifications of the structure.

- 5. Referring to Claim 3 Duflos discloses (col.2, lines 8-18) that the irreversible modifications (inclusions) are obtain to focusing of electromagnetic radiation because they are diffusing the light rays emitted from the light source and, as well known in the art, the light rays are the electromagnetic radiation.
- 6. Referring to Claim 6 Duflos discloses (Fig.5, Abstract) that the light-diffusion foci (inclusions [14] diffuse the light rays originating from the light source [20] of the headlamp and incident on the component.
- 7. Referring to Claims **10**, **18** Duflos discloses (col.1, lines 2, 3; col.2, lines 1, 2) a component used with indicator light and diffusing the light rays emitted by at least one light source (Fig.5, [20]).
- 8. Referring to Claim 12 Duflos discloses (col.2, lines 19-21) that the inclusions size is in the range between about 0.1 and 100 microns.
- 9. Referring to Claims **13/1**, **13/2**, **13/3**, **13/6**, **13/8**, **13/10**, **13/12**, **14** Duflos discloses (col.3, lines 16-22) that the transparent material is plastic or glass.

Art Unit: 2875

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 10. Claims **4, 9** are rejected under 35 U.S.C. 103(a) as being unpatentable over Duflos (US 6,464,382) Duflos discloses (Fig.5) a lighting device having a light source [20].

Referring to Claim 4 Duflos disclose the instant claimed invention except for a light source is laser.

It would have been obvious to one having ordinary skill in the art, at the time the invention was made, that any desired type of the light source including laser can be used in the device for purpose of emitting the light.

11. Referring to Claim 9 Duflos disclose the instant claimed invention except for converging lens and elliptical reflector.

Converging lens and elliptical reflector are well known in the art. While Duflos discloses parabolic reflector it will of course be understood that reflector made of any desired form including elliptical can be used for the device.

It would have been obvious to one having ordinary skill in the art, at the time the invention was made, to provide the elliptical reflector and converging lens, that are well known in the art, for the device of Duflos for purpose of reflecting and transformation the light.

Art Unit: 2875

Claims **5, 13/5, 15, 16** are rejected under 35 U.S.C. 103(a) as being unpatentable over Duflos (US 6,464,382) in view of Guyomard (US 6,290,287).

12. Referring to Claims **5**, **15** Duflos disclose the instant claimed invention except for motor vehicle headlamp glazing.

Guyomard discloses (Fig.2) a vehicle headlamp having the glazing [G] that is used for closing a lamp casing (col.2, lines 3-5).

It would have been obvious to one having ordinary skill in the art, at the time the invention was made, to provide the component of the headlamp of Duflos with the glazing of Guyomard in order to close the lamp housing and prevent the damage of the component.

13. Referring to Claim 16 Duflos disclose the instant claimed invention except for the headlamp incorporating the component as an insert.

Guyomard discloses (Fig.2) a vehicle headlamp having the glazing [G] that is used for closing a lamp casing (col.2, lines 3-5).

It would have been obvious to one having ordinary skill in the art, at the time the invention was made, to use the glazing as taught by Guyomard for the component of Duflos, as an insert located between the light source and the glazing.

Allowable Subject Matter

Claims 7, 8, 11, 13/7, 13/8, 13/11, 17, 19 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Art Unit: 2875

The following is an examiner's statement of reasons for allowance:

14. Referring to Claim 7 the prior art of record fails to show the component wherein the light diffusing foci diffuse the light rays originated from an auxiliary light source.

- 15. Referring to Claim 8 the prior art of record fails to show the diffusion foci diffusing the light rays originating from an auxiliary light source.
- 16. Referring to Claim 11 the prior art of record fails to show the component wherein the component is partially metallised.
- 17. Claims 13/7, 13/8, 13/11 are allowed as claims depended on claims 7, 8, 11.
- 18. Referring to Claim 17 the prior art of record fails to show that the component is a converging lens.
- 19. Referring to Claim 19 the prior art of record fails to show a component having a repeater light, adapted for repeating a lighting or indicator function.

Response to Arguments

Applicant's arguments filed on 7/07/03 have been fully considered but they are not persuasive.

Applicant argues that Duflos does not taught or suggested a component for a vehicle lighting in which the inclusions are created by electromagnetic radiation on the material.

In response, the Examiner would like to direct Applicant's attention to the fact that the electromagnetic radiation is a beam of light rays that can not create any type of inclusions in the material. Insertions in a plastic material may be solid insertions, inserted in a process of molding, or air bubbles, created by hot melting process.

Art Unit: 2875

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as

set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS

from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the

mailing date of this final action and the advisory action is not mailed until after the end of the THREE-

MONTH shortened statutory period, then the shortened statutory period will expire on the date the

advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from

the mailing date of the advisory action. In no event, however, will the statutory period for reply expire

later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner

should be directed to Mark Tsidulko whose telephone number is (703)308-1326. The examiner can

normally be reached on 8 - 5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor,

Sandra O'Shea can be reached on (703) 305-4939. The fax phone numbers for the organization where

this application or proceeding is assigned are (703) 872-9318 for regular communications and

(703) 872-9319 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should

be directed to the receptionist whose telephone number is (703) 308-0956.
